

## Dynamic social-wall with dedicated webapp

Give your visitors the opportunity to express their opinion through our **dynamic social-wall**. Our application has been developed in close collaboration with a team of event professionals and provides unique features.

Our software is able to download content from all 3 **main social networks**: Twitter, Facebook and Instagram. On top of this we provide a dedicated webapp that allows participants to contribute **without going through social networks**.

You can also **moderate and individually feature content**, giving you complete control on everything that's displayed.

-  Dynamic and interactive
-  Easy-to-use and 100% in control
-  Customizable color theme and log
